1 Agent Transaction

1.1 Overview

The Agent Transaction application allows the analysis of various agent activities over time on a weekly or monthly basis. Active agent amounts are available by the agent related dimensions.

Drill-through is available on the agent amounts in conjunction with the Date or Wk Date hierarchy.

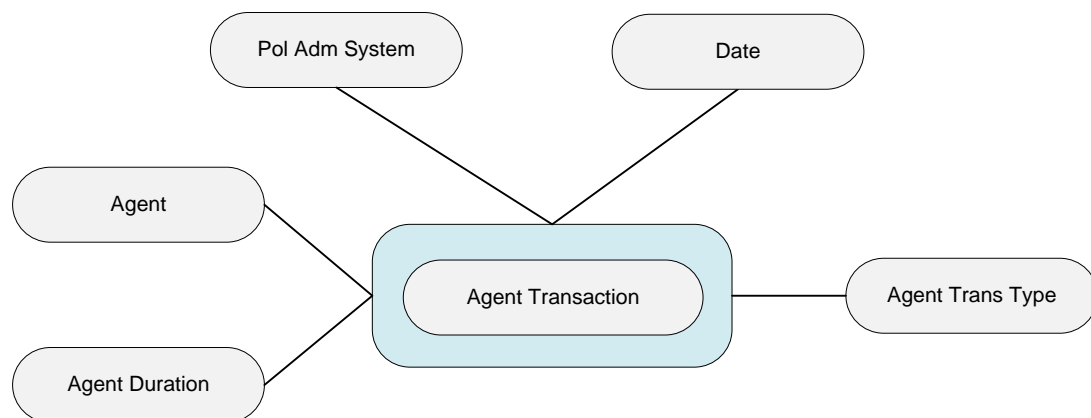

The Agent Transaction application is loaded on a net month-to-date basis from the policy or agent administration system with transaction extracts during the load period.

1.2 Structure

The Agent Transaction application has the following structures:

Type	Name
Measure Groups	Agent Transaction
Time Dimensions	Date
Measure Dimensions	Agent Trans Type
Agent Dimensions	Agent
Duration Dimensions	Agent Duration
Policy Dimensions	Pol Adm System

1.3 Schema

1.4 Time Dimensions

The Date dimension is based on the load date of the agent transactions over time with transactions at the transaction date where appropriate.

1.5 Measure Dimensions

The Agent Trans Type dimension identifies the type of agent transaction. It is user defined and hence will vary. Transactions should be signed inward or outward for the total to represent a net amount. Reversals should be opposite in sign and as of the reversal date.

1.6 Measures

The Agent Transaction measure group has the following 2 measures as determined by the measure dimensions for the period determined by the Date dimension:

Measure	Description
Agt Trans Amount	From srcAgentTransactions.Amount
Agt Trans Count	Number of agent transaction records

1.7 Discussion

Agent Transaction counts and amounts are available in the Agent Transaction measure group. The Agent Trans Type dimension defines the amount. A ledger approach is taken such that reversals adopt the opposite sign and occur at the reversal date.

Agent Transactions are available on a weekly and monthly basis, and hence can be analyzed using either the Date or Wk Date hierarchies.
